The most expensive woods in the world are used for art pieces, musical instruments, jewels, kitchen utensils and uses pencil. For milts, wood has been a basic civilization. There is no doubt that the wood shaped the stroke of history. From the use of the first man of branches and barking for heat for a subsequent dependence on wooden products and plants for daily necessities. As the civilizations developed, the variety of woods gave rise to other uses. Shelter and boats, for barrels and barrels, for agricultural implements and kitchen utensils. Wood versatility fueled human creativity, and as several cultures developed, wood has transformed the world. The growth of civilizations is intertwined with the historia of Madeira. The local availability of wood once had a limiting effect on the types of products and uses that evolved. At some point, you still have. But in a global economy, it is possible to obtain exotic woods or scarce woods for special uses in virtually anywhere in the world. Today, the demand for Of these woods was never stronger, with prices to match. Wooden common wood types is an organic material, porous and fibrous structural fabric found in trees and "Woody" plants. "Woody". It is the basic building block of the plant and performs a support function for growing trees and plants. In the living plant, the fabric is the systemic supplier of water and nutrients of the roots for the stems and leaves. Although it is common to think of only the tree trunk as wood, the broad term also can refer to the branches and roots of various plants. A traditional distinction was made between woods obtained from rolling trees and smoother woods obtained from cone trees. But this distinction is confused because some con mutants really produce woods. Traditional woods include cherry, oak, maple, mahogany, walnut, teak and jacarandĀ;Ā. The common flops are pine trees, ashes and hickory, along with beech, breet, spruce, cedar, spruce, hicuta and sequitor. Some woods were the options of wood routes over time. Wooden choices have changed along the sections, however. Bowling Balls were already made almost exclusively from Lignum Vitae, a slow-growing flortion wood / tree found mainly in the central american and in the northern portion of the South Africa. The introduction of the rubber has changed that at the beginning of the XX. However, the cricket balls are still made from this relatively rare wood that looks painted, even in their natural state. Wood and characteristic uses There are many regional varieties of woods that have also been valued for their unique features, traded on world markets and used for functional and articular purposes. Current worries with sustainability and deforestation have led the international union for nature conservation to put some sports on the red list and discourage the use of certain woods in an effort to reduce the possibility of extinction of some trees at risk. It is estimated that until 1,400 trees are critically threatened and need immediate action of conservation. Three of the forest in this list - African Blackwood (Mpingo), known as the National Tanzan Tree, Honduras Rosewood, a member of the Dalbergia Ganner currently found in Mexico, Belize, and Guatemala, and Bano Macassar. Also known as striped bano - are considered in danger. Madeira remains the most common material on the planet, and its use in everyday life is widespread that most people think twice about the variety or characteristics of the wood they use. Of pencils and kitchen spoons for salad pinches or cutting tables, from home framing the outdoor decks, violin pianos, wood is part of everyday life. Different woods are highly valued by their unique features. Some command expensive prices because of their rarity or extreme durability, others because they represent a challenge to work. Still, others enjoy high popularity because of their beauty, and products made from these woods are considered a status symbol. We must make it clear that these are not the forest you would use to surround a backyard, normal home flooring, or building kitchen cabinets, although fine mobile, musical instruments and decorative art are certainly made from these varieties. The exotic requirement of desirable woods for the most expensive woods varies, and the prices can float substantially from one year to the next. Although a lot of wood is sold by the Council's Pan, some of the most exotic wood prices, particularly those suitable for minor projects and unusual use, are per kilogram. Both professional hobbys and woodworkers attend attention to the price and determine their needs accordingly. Here are 11 more expensive woods in the world available today 1. Blackwood African (Dalbergia Melanoxilon) Ā log can cost approximately \$ 9,000; The price for the wood processed in 2016 Listed as \$ 13,000 per cubic meter. It is commonly with price at a minimum of \$ 100 per footstep. Typically a small tree found commonly only to the southern Sahara desert in This extremely slow growing tree has a hood that is dense, fine grain, and melodious. It is heavy and difficult, valued by its dark purple color, almost black, and is mainly used for art pieces and musical instruments, the two breath instruments and small string instruments. It is an oily wood and does not allow rust to form in tools. Historically used for the grips of early European instruments, the wood was widely exported from British, French and German columns in Africa, and also used for mobile inlays and Turned ones. The tree itself grows only about 50 feet high, is strange, and it is not totally mature until it is about 200 years of age. Most trees are harvested today at age 70 to 80 years, with an extensive on-site replanting program to ensure future supply. This makes African Blackwood the world's most expensive wood. 2. Ebony PRECION: Fine Ebony will command a price of up to \$ 10,000 by ebony almost-black Impressive kilogram, it is harvested of sights of diospyrosĀ genre trees, which grows Throughout the traits. The bark of the Ceylan and Indian Ebony trees appears as wide and charred, almost black. She hides a pure white wooda layer that can be two inches wide, around a vegetable carvan of depth, nucleus-almost black. It is the core that is used for veneers and articular applications. The wood has a flat grain, it is smooth and dark, and can be polished to a high gloss. This makes it extremely valuable for use as piano keys, decorating articles and fine mobile. Ebony is also extremely dense and heavy, and he will sink into the water. Other varieties of bano, including some grown in the United States, can be almost black-green in the appearance. 3. Sander PRECION: A large piece of santry for handicraft purposes can be purchased for about \$ 85 per 100 grams. Pregs of wooden chips vary between \$ 70 and \$ 250 per kilogram. Madeira for mobile or articular uses would be beat more expensive. SĀndo, aromatic wood, yellow-gold is derived from a slow growth tree found in all Southeast Asiatica and the South Pacific Islands, is more important in Eastern ceremic and religious rites than to work wood. In its powder form, which is used for the brands breeze and as sachets, and the oil is an ingredient in perfumes, fragrant candles, soaps, and incense. It is also a component of popular medicine. However, the core also is valued by mobile and ornamental boxes. White Alburno is often used for fans. SĀ ě ndalo is now commercially cultivated and harvested in Australia, mainly by its oil. 4. Holly American Holly is a white wood that is said to be excellent for turning, handicrafts, sculpture, and the purposes of the inlay. Due to its very pale, almost white coloring and smooth surface texture, it is also popular for piano and erging keys, and for inlay lines. However, Holly trees are small and slow growing, making it extremely rare. Holly is subject to an unique form of folk coloring that gives him a gray tone, and must be harvested in winter and dries quickly. It is often not thought of like a wood, it is a distinctive choice for fine Turnery and exotic uses. It is considered a wood with a gran near. Hollywood also takes stains easily and sometimes is dyed black as a substitute for ebony. 5. Very rare ivory, pink ivory is esteemed by its color, the brighter and brighter, better. She can vary in the tone of a pink brown to a deep brilliant, almost red-puff. Hard and strong with a fine texture, this exotic rare wood is native to the south of the Africa, predominantly Zimbabwe, Moçambique and South Africa, where its crop is sustainable and controlled. The wood is to turn and for artistic purposes. It makes beautiful small bowls for a variety of uses and also popular for knife and jewelry cables. 6. JacarandĀ;Ā (Dalbergia Nigra) One of only two woods in the world known for a pattern known as a spider-belts, to this original wood may vary in Dark chocolate for a red or purple tone with darker stripes. He is also known even lighter Sappwood, yellowish that adds distinctive appeal to the darker core. Although the grain is usually straight, it can also be wavy or spiral, giving it a distinct appearance. Considered one of the most durable types Ā ě Ā ě Ā ě of wood, which resists insects and decaděncia, is easy to work with manual tools or machines-tools, and usually is easy to finish. However, it tends to be oily and sometimes do not look good. JacarandĀ;Ā, also known for a variety of other names, is used for everything, from floor to furniture, musical instruments and small art pieces, and for varnish and massive wood projects. It is well known and expensive, but durable and requires few care in normal conditions. Its use has been explored, but is now more rigorously controlled. 7. The second zryicote wood to be known for its spider pattern, Zryicote is a heavy, medical for dark brown wood from the center and central america. It is a popular choice for armaries and furniture, musical instruments such as guitars and gamstocks. Known for its decadency resistance and lasting good appearance, it is widely available, and some of the finer wood has a distinctive green or purple cast. 8. Macassar Ebony durable, but difficult to work this special wood is also known as striped ebony. The most suitable rare wood for internal use. It has an impressive appearance, but do not tolerate well insects, and can crack during the drying cycle. Grown in southeastern SIA, which often appears yellowish or reddish-brown with darker stripes, and provides a dramatic look for large pieces of furniture that can be very expensive! It is extremely rare and are currently on the top-of-the-counter list of extinguishing. It is still possible to find smaller products including pens and pencils, billiard tacos and musical instruments made of Macassar Bano. 9. Koa A native spy for the Hawaii islands, this wooda appearance can be similar to mahogany. Because some of Hawaii's native forests were deforested for pastures and young trees are the favorites of peas you grazing, it is becoming more scarce and the prices seem intended to rise. It is popular for guitars and cavaquinhos, and its shades of red-gold or light and simple grains make it a choice at the armaries and furniture. Koa Bowls are widely used on the island, and represent favorite tourist souvenirs. 10. Cocobolo Cocobolo is a central american wood that is widely appreciated by the owners of firearms and expensive knives. Itams a beautiful wood ranging from orange to reddish brown with dark dressings that work through grains. Only the heart of the wood is used and is unique in which the color of the certh changes after the cut. Cocobolo is dense and difficult, can be polished to a bright glow, and has a pleasant tone. Music and chess players value wood as much as sportsmen. He is used for handmade guitars, flutes, clarks, and belows, as well as plaid pieces and gun grtps. 11. Bubinga (African Rosewood) Arriving in last on our list more facing woods is Bubinga. It is it Ā ě Sometimes referred to as a Rosewood substitute, even though it is not even the same family as a true Rosewood. It is a soft, impressive wood of the GĀ © nero gubourita. Different examples of wood can vary dramatically into the shade and pattern of grĀ Ā Ā. That said, it is popular because the trees grow to be immense. Great slabs are available with natural edges and used for dramatic tablets, tables and conference tables. It Ā ě s also a popular varnish and is used to produce not only well, but musical instruments, armaries, turns, and special items. All Rosewood Varieties are very Dear, and many have become more and more scarce, making a option bubinga even better. choice. choice.
