Aphis form 7001 pdf

Airlines require an acclimation certificate that allows them to ship dogs and cats when they cannot guarantee compliance with the guidelines for animal welfare. Typically, a veterinarian certifies that the transported animal is acclimated at temperatures below 45 degrees F. Check with your airline to see if they meet the guidelines for animal welfare and if an acclimation certificate is required. Here are the links with some local airlines and some information about international travel: International – American Airlines – United Airlines – If you are bringing a pet to another country (permanently or for a visit,) contact the consulate Many countries require your pet to have an international health certificate (APHIS FORM 7001 – “United States Interstate & International Certificate of Health Examination for Small Animals”) to be completed by the accredited veterinarian APHIS who certifies the animal health status, conducts tests and records the test results for individual animals exported. A list of consulates can be found at foreign consular offices in the United States To obtain USDA approval of international health or any other travel document with your pet, documents must be completed by an accredited veterinarian APHIS. If you need any type of health certificate (domestic or international) please call our office to make an appointment. All dogs and cats that import and transit into the EU will be subject to regulations. In addition to an anti-rabies certificate vaccinations and international health certificate, all dogs and cats must have a implanted microchip or a clearly readable tattoo. Pets who do not meet these requirements will not be allowed at the entrance. IMPORTANT NOTICE: From 10/01/07 all animals going to any country of the European Union must be examined by USDA Port Veterinarian. Also the requirement of the vaccine against anger for Poland has returned to be given at least 30 days before departure and not exceeding 12 months (cat 6 months). Chicago (O’Hare) USDA- APHIS- VS 2300 E Devon Avenue #220 Des Plaines IL 60018 Office: (847)298-5220 Fax: (847)298-5224 (Only by appointment) Effective immediately, APHIS Form 7001 “United States Interstate and International Certificate of Health Examination for Small Animals” is no longer approved for the purpose of interstate movement. Please be aware that many other states, in addition to Washington, no longer accept this form because of free access to the public for downloading via the internet without any responsibility for those who use the form. The Department will still accept paper of the APHIS 7001 module, provided they are printed by the U.S. Department of Agriculture (USDA) in a multi-page carbon copy format with a USDA certificate number. Although no new copies are available, the supplies previously provided may continue to be used. The Department will also accept other types of certificates as long as the module has been assigned a unique number and all required certificate information is contained in that document. There are three free electronic CVI alternatives: mCVI; eCVI; or Monitoring the process of veterinary services (VSPS). The mCVI is an App that works on Apple or Android mobile devices; eCVI is a fillable PDF module that can be generated and stored on your computer; or the web-based VSPS developed and managed by USDA/APHIS. For more information about electronic CVI and how to start, visit the WSDA website. If you have any questions, please contact your state veterinarian Dr. Brian Joseph at (360) 902-1881 or by email at . The satisfaction of customers’ demands for health forms for their pets during the domestic journey cannot be as simple as once, now that states are changing their guidelines. The passage in the last year or so comes in the midst of concerns about fraud, along with the expansion of interests in the electronic presentation of veterinary inspection certificates. Dr. Valerie Ragan, Director of the Center for Public and Corporate Veterinary Medicine at the Virginia-Maryland College of The medicine, he said, “With globalization occurring these days, resulting in increased potential spread of diseases such as African pig fever, this is only driving interest in moving towards safer CVI and those that can be moved faster than paper products.” Dr. Ragan is a former deputy director of the U.S. Department of Animal Agriculture and Plant Health Inspection Service. He presented the webinar “Small Animal Requisites for Movement and Travel” on March 29, sponsored by GVL, a company offering forms of electronic health. Flow status The APHIS USDA veterinary inspection certificate, known as Form 7001, is available from the end of the 1980s, first as a multi-page carbon-copy format but more recently as a PDF. The module essentially attests that an accredited veterinarian USDA has examined an animal and that the animal satisfies the regulations on where it is on the road. “You had to send a copy to the state, give a copy to the owner, and you kept a copy. Actually, a number of forms were not sent and this created a problem when we were trying to track exposed or affected animals,” said Dr. Ragan. Now many states no longer accept USDA APHIS Form 7001 or are thinking of making change. Dr. Peter Mundschenk, Arizona State Veterinarian, said JAVMA News that his office will accept “anything” at this time for pets entering Arizona, whether it is module 7001 or CVI of another state, but he noted that the rules are currently underway A problem with module 7001 is that it is accessible online to anyone, not only veterinarians. In addition, the module does not have a unique identification number, which prevents trace the origin, said Dr. Mundschenk. These circumstances mean there is a greater probability that someone will forge a veterinarian’s signature to create a fraudulent form. “Someone could Photoshop the name of a veterinarian on it, and it could be reused over and over again,” he said. When the new rules of Arizona enter into force, the state CVI will have a unique identifier, and the state will probably no longer accept Form 7001, joining almost half of the other states. One alternative didn’t take Form 7001. Paper and electronic alternatives are widely available. In fact, almost all states provide veterinarians with CVIs paper for small animals, which are accepted by all other states that require CVI, but veterinarians must request form by phone, fax or online. In addition, many electronic options have a cost associated with them. “We are in a transition period,” between module 7001 and an alternative, said Dr. Ragan. “In a lot of places, you can use one or another, but not in all cases.” In addition, requirements vary between airlines. Dr. Ragan said: “I’m in the flow right now, from print to electronics. It’s an active discussion. If you send an animal by air, airlines have their own requirements that often have to do with acclimation. Check with the airline to see if they acceptor hard copy. Most are in the process of considering moving from one to another. However, I always printed a hard copy, just to have at hand.” electronically, the cvs or electronically presented is growing rapidly because certificates can be sent directly to the office of a state veterinarian, which means less possibility of fraud due to authentication and unique identification numbers. “We’d like everyone to go to an ecvi,” Dr. mundschenk said. “In this way, we can transfer information more seamlessly to databases so that they can monitor animal movements faster.” the ecvi of gvl is accepted in all 50 states. the institute for infectious diseases animals agview cvi also offers an ecvi option and is now also accepted by all 50 states. other companies may be in line with their options, but veterinarians must check that these options are accepted by the target state before using them, Dr. ragan said. For help, veterinarians can call the relevant state vet’s office. Overall, Dr. Ragan exhorts the following: make sure you are properly accredited by the oda. know the requirements for the species and the location where the animal is going. Ask for help if necessary. start the process in advance. As for the first point, Dr. Ragan noted that some states may allow uncredited veterinarians to write dec, but not all. Finally, although customers are often not required for animal health modules during the trip, veterinarians cannot check if a customer is asked for a dec.dogs and cats are not much a threat of disease than cattle,” said Dr. Ragan. “There is not much effort put into control for health certificates for pets in a vehicle. But our job is not to decide if they will check, but to know the requirements and meet them and advise customers on how to meet them.” Travel website for pets updated for pet owners, veterinarians (15 March 2019) Now available: model certificate for domestic pet travel (Gen. 15, 2010) 2010) aphis form 7001 instructions. aphis form 7001 mexico. aphis form 7001 spanish. aphis form 7001 a continuation. how to fill out aphis form 7001
